Microsoft Elevate

CAPSTONE PROJECT

# Elevating the Dining Experience

PRESENTED BY

STUDENT NAME: BAPPI RAMAN SINGH

COLLEGE NAME:THAKUR COLLEGE OF SCIENCE AND COMMERCE

DEPARTMENT: INFORMATION TECHNOLOGY

EMAIL ID:BAPPI.R.SINGH@GMAIL.COM

# OUTLINE:

- **Problem Statement**
- **Proposed System/Solution**
- **System Development Approach** (Technology Used)
- **Algorithm & Deployment**
- **Result (Output Image)**
- **Conclusion**
- **Future Scope**
- **References**

# PROBLEM STATEMENT:

Restaurants generate enormous amounts of sales data, but they often find it difficult to identify key trends, winners, and peak ordering times. Without the aid of visual analytics, it becomes difficult to leverage the data to inform business decisions to improve sales.

# PROPOSED SOLUTION:

- **One possible method to accomplish this would be to develop an interactive Power BI dashboard that explores historical sales data for restaurants. This will give a clear and visualized understanding of where money is being made, what types of food are most popular, and what methods are preferred for payment.**

# SYSTEM  APPROACH:

- **Tool:** Microsoft Power BI Desktop
- **Data Source:** CSV Sales Dataset
- **Techniques:** Data Cleaning, Data Transformation (Power Query), and Data Visualization (DAX & Interactive Charting).

# ALGORITHM & DEPLOYMENT:

- Step 1: We acquired raw CSV data, which included over 4,000 orders from various restaurants.
- Step 2: We prepared the data by correcting data types (Decimals, Dates) and filtering out cancelled orders.
- Step 3: We designed interactive charts (Line, Donut, and Pie charts) to present the gross sales and estimated profits.
- Step 4: We implemented interactivity using slicers to enable dynamic filtering by food category and a final static report for analysis.

# RESULT:

# CONCLUSION:

The Power BI dashboard does a great job of converting the raw restaurant data into useful insights. From the data, it’s clear that the most preferred method of payment for the customers is cards, and the revenue for the restaurant comes from the sale of the main courses.

# FUTURE SCOPE:

The future enhancements may include connecting this dashboard to a live database such as MySQL to monitor the sales in real-time. Further, the use of machine learning algorithms could be helpful to predict the sales for the next day or the peak hours based on the trends.
